THULASI RAM RUPPA KRISHNAN

Staff Data Engineer

Phone: (732) 331-4638 | Email: thulash.tce@gmail.com

PROFESSIONAL SUMMARY

- Staff-level data engineering and architecture leader with 17+ years building large-scale data foundations, backend data systems, analytical products, and distributed pipelines across healthcare, enterprise SaaS, finance, legal, workplace, and marketing domains.
- Deep end-to-end data stack experience spanning ingestion, batch and streaming processing, storage, transformation, quality, governance, lineage, serving, and analytics using Python, SQL, Spark/PySpark, Kafka, Databricks, Delta Lake, Azure, AWS, Redshift, and relational platforms.
- Proven technical leadership across organizational boundaries: sets architecture direction, resolves cross-domain design decisions, standardizes engineering patterns, mentors engineers, and translates technical tradeoffs into business outcomes for senior stakeholders.
- Hands-on experience with identity/entity-resolution patterns, customer and marketing data, privacy-sensitive healthcare data, audit controls, regulatory governance, and AI/agentic technologies that improve data engineering and operational workflows.

CORE COMPETENCIES

Data Platforms: Databricks, Delta Lake/Delta Share, Spark/PySpark, Azure Synapse, ADLS, Redshift, MySQL, SQL Server, PostgreSQL

Data Architecture: Ingestion, processing, storage, serving, reusable data products, semantic/analytical datasets, APIs, metadata, lineage, data quality

Identity & Customer Data: Entity resolution, person/customer data integration, cross-system data unification, marketing/campaign data foundations

Engineering Leadership: Cross-org architecture, technical standards, design reviews, stakeholder alignment, mentoring, SDLC ownership, Agile/Kanban

Streaming & Distributed Systems: Kafka, Spark Streaming, real-time and incremental pipelines, high-volume batch processing, scalable distributed architectures

Privacy & Governance: Sensitive-data controls, encryption, Key Vault, audit processes, regulatory compliance, governance, access/security patterns

AI for Data Engineering: LLM agents, RAG, source-grounded querying, AI-assisted triage, MLflow/MLOps, Azure AI, OpenAI, Anthropic, Llama

Programming & Platform: Python, SQL, FastAPI, Java, UNIX, Docker, Kubernetes, Terraform, Git, CI/CD, Azure, AWS

PROFESSIONAL EXPERIENCE

Senior Data Engineer - Data Platforms & AI Solutions

Atlassian | USA | July 2025 - Present

- Own end-to-end delivery of scalable data products and platform pipelines across Legal, Finance, Sustainability, and Workplace domains, connecting ingestion, processing, quality, serving, and analytics while partnering with engineering and business stakeholders on architecture and success measures.
- Designed and built Databricks/Delta Lake pipelines and reusable analytical products across six major initiatives; standardized workplace data jobs and expanded integrations across Cisco, Jira, Legal, and Finance ecosystems.
- Re-architected Google Maps geolocation processing from batch to incremental pipelines, reducing processing time from days to minutes and materially improving data freshness.
- Built high-scale workplace utilization data products covering 16,000+ employees, reducing processing from 4-5 days to ~5 hours and supporting decisions with $100M+ business implications.
- Unified four cross-system customer-friction sources into an integrated data product for Legal and Product prioritization; built executive KPI products that improved decision speed and operational visibility.
- Built climate compliance pipelines with automated data-quality controls, reducing turnaround from 3-4 days to under 1 hour; supported audit and governance work including 1,400+ labeled records with 87.8% recall.

- Shaped API-to-Delta Share Jira migration architecture, including dedicated Legal/Finance codebase isolation, governance boundaries, maintainability, and transition standards; took ownership of three Legal data products plus a new Atlassian Data Product.
- Built AI-enabled tools including Finance Data Investigator and a Legal Q&A agent that handles grounded, lower-complexity inquiries and triages complex or higher-risk matters to lawyers for expert review; hardened on-call chatbot workflows with recoverable error handling and graceful degradation.
- Mentored engineering talent and shared reusable data/AI patterns through internal forums, brown-bag sessions, and AI-adoption initiatives.

Technologies: Python, SQL, Databricks, Delta Lake/Delta Share, Spark, Kafka, Azure, Jira, Git/CI/CD, Anthropic API, OpenAI, LLM agents, RAG

Senior Manager / Solution Architect - Data Engineering

Teladoc Health | NY, USA | Nov 2014 - July 2025

- Led architecture and engineering direction for enterprise data platforms serving 10M+ users, coordinating developers, data engineers, data scientists, analysts, DBAs, and business stakeholders across multiple concurrent programs.
- Built large-scale data-lake and warehouse foundations across Azure Synapse, ADLS, Databricks/Delta Lake, Redshift, MySQL, SQL Server, and PostgreSQL, supporting structured and unstructured data, reusable analytical datasets, metadata, lineage, and downstream serving.
- Architected real-time Kafka/Spark Streaming pipelines with sub-second latency requirements and embedded data-quality controls and monitoring; drove large batch-to-incremental re-architecture and platform modernization.
- Led EDW-to-cloud modernization and data replication across clinical, finance, survey, eligibility, provider, and operational domains; improved processing performance by 30-80% while reducing platform cost and compute consumption.
- Led marketing and audience data engineering, including a personalization engine for targeted audiences, bringing together member/customer signals, campaign metadata, eligibility and engagement data to support audience segmentation, personalized experiences, and measurement-ready analytics. Built cross-system data foundations that connected identity, behavioral and campaign signals for downstream targeting and business decision-making.
- Designed identity and data-quality solutions across member/person and provider data, including entity-resolution approaches, source reconciliation, CDC/delta patterns, and governed master-data workflows.
- **Connected identity and audience data patterns with personalization use cases, enabling reliable audience selection and targeted engagement while maintaining healthcare data governance, privacy, and data-quality controls.**
- Built privacy, security, and audit controls for sensitive healthcare data using encryption, Azure Security Center, Key Vault, retention controls, and documented regulatory processes; partnered with audit and executive stakeholders on compliance readiness.
- Established reusable architecture and engineering frameworks, technical specifications, diagrams, operational standards, and MLOps practices; led design workshops and technical decisions across organizational boundaries.
- Mentored engineers and technical leads while setting engineering standards across production support, data platform modernization, AI/ML adoption, and delivery practices.

Technologies: Python, SQL, Databricks, Delta Lake, Spark/PySpark, Kafka, Azure Synapse, ADLS, Redshift, MySQL, SQL Server, PostgreSQL, Azure ML, MLflow, Docker, Kubernetes, Terraform

Lead Data Engineer

Emblem Health | NY, USA | June 2013 - Nov 2014

- Led data engineering teams through healthcare code-standardization and claims-processing initiatives, designing scalable pipelines with audit controls, data-quality validation, and regulated-data governance.
- Directed cross-functional technical delivery and stakeholder alignment during major enterprise data transformations.

Lead Solution Architect

MVP Healthcare | NY, USA | Mar 2013 - June 2013

- Designed provider and member data solutions, including ML-based entity resolution and data-quality assessment; translated business requirements into scalable data architecture and implementation plans.

Technical Lead

AIG | NJ, USA | Jan 2008 - Mar 2013

- Led enterprise data and predictive analytics engineering for workers' compensation underwriting and risk assessment, including large-scale ETL, automated scoring, deployment infrastructure, and real-time adjustment capabilities.
- Provided technical direction across multiple concurrent engineering initiatives and managed stakeholder alignment through full SDLC delivery.

EDUCATION & CERTIFICATIONS

- Master's in Applied Data Science
- Bachelor of Engineering in Civil
- Databricks Certified Machine Learning Professional
- Microsoft Certified: Azure Data Engineer Associate
